

- **Camera Enclosure**

Installation

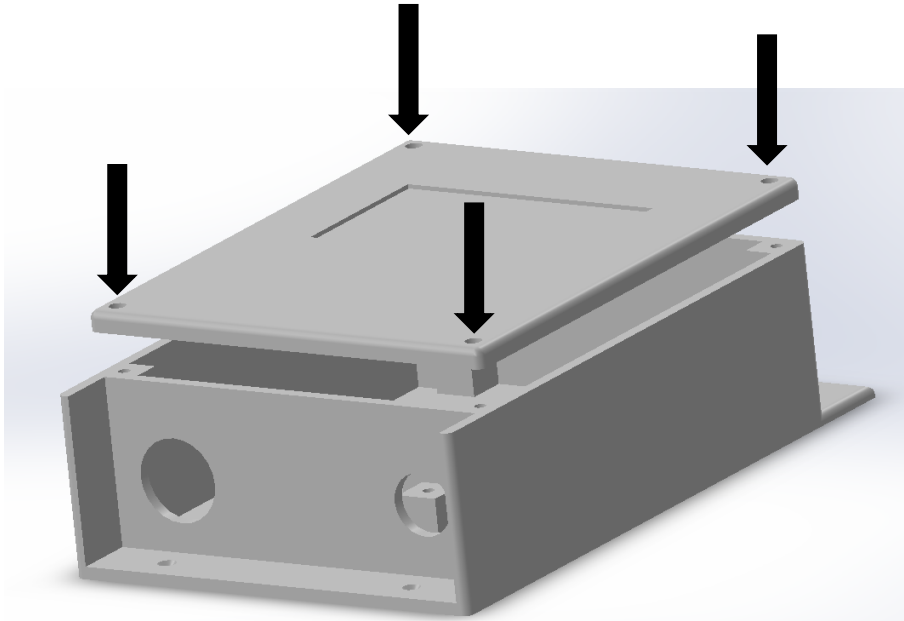

- **Main Base**

Use the given 4 screws to install the main base to a flat surface.

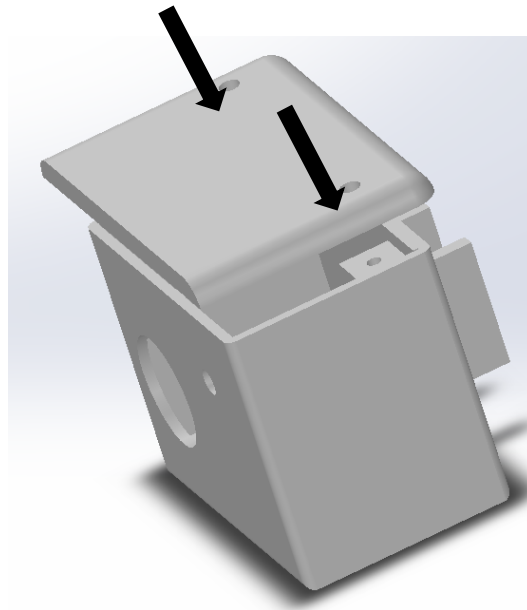

- **Top Cover**

Use the following holes and screws to connect the top cover to the main base.

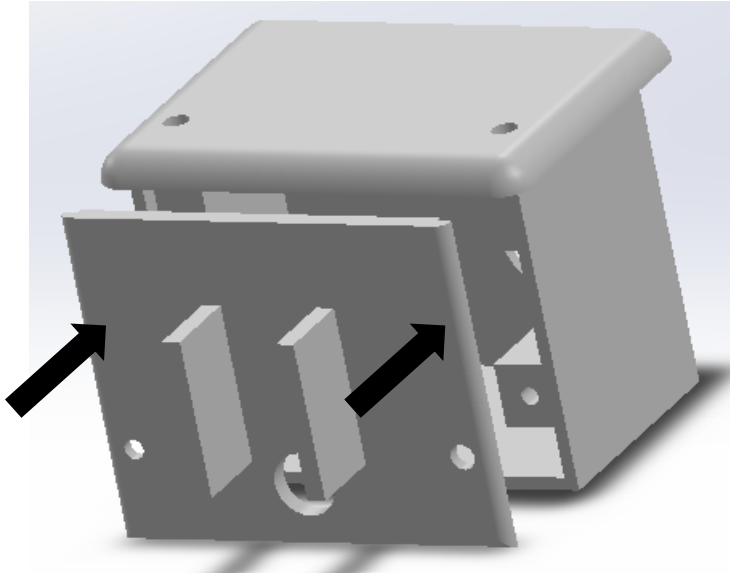

- **Camera Top Cover**

Use the given 2 screws to connect the camera top cover to the camera base.

- **Camera Back Cover**

Use the given 2 screws to connect the camera back cover to the camera base.

Finally, you have to connect the camera to the top cover brackets.

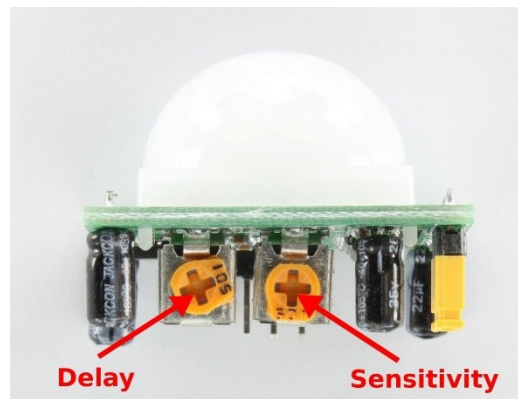

PIR Configurations

Adjusting the sensitivity of the system

If the motion detection system is too sensitive or not enough sensitive, we can use the “S” adjusting point to adjust that. Put a screw into that point and turn it clockwise to make the sensitivity higher.

Adjusting the time delay of the system

An adjustable knob “T” is included to set the duration for which the output remains HIGH after detecting IR. This time frame can be set between 5 seconds and 5 minutes.

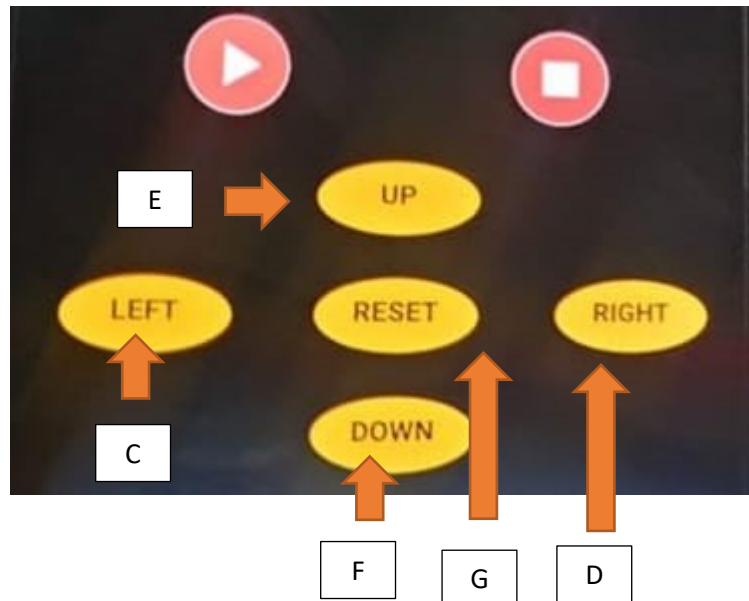

- You can click the reset button when you want to switch off the buzzer.
- Also, you can switch off it as per your choice.

Power Configurations

- Use the given Power extension to power the system.
- Directly connect to the Main supply. (240V/ 50Hz – 13A)
- Warning – Be mindful of the power connection!
